## PROFESSIONAL SUMMARY

A Computer Science and Engineering student with three internship experience possessing 2+ years of hands-on professional knowledge in Data Science and Machine Learning with a 3+ years overall coding experience. Comfortable with working in a team and also leading it. Constantly keeping myself updated here having a vision to see myself working professionally in this field.

## INTERNSHIP EXPERIENCE

<b>Myways</b>	<b>Machine Learning Trainee</b>	<b>Aug'21 – Oct'21 (3 Months)</b>
<ul style="list-style-type: none"><li>Explored Different Recommendation systems like content, collaborative filtering made the models from scratch and used in different kind of data, analyse different data output where the wrong parts were happening fixed those for good accuracy</li><li>Asked minimum question to each user so they won't get bored, predict the right pathway and the content depends on answers</li></ul>		
<b>CDAC- Kolkata</b>	<b>Research Intern</b>	<b>Apr'21 – Aug '21 (4 Months)</b>
<ul style="list-style-type: none"><li>Explored some Security methodologies to check an URL is <b>phishing or not</b>, then build a Machine Learning Model for that, If the URL belongs to a <b>Google Form</b> it'll Scrap and will show the information is asking there and analysis those are safe or not</li><li>Developed a process where a user can send a <b>twitter id</b> and the model will scrap whole first page tweets and take URLs from the tweets and expand each URL then predict those URLs are Safe or not and if any google form found then same as above</li><li>For analyzing the text made a manual dataset on different ads and analyze which ads are influencing people in which way so, finetuned a transformer model 'Bert-base-uncased' then build a model to classify those texts, got 97% accuracy within that small data, made a confidence model that will show in which prediction the model is more confident, stored near about 50k data took those confident prediction used to build a stronger dataset then apply the model and got near about 92% accuracy.</li></ul>		
<b>hello ML</b>	<b>Machine Learning Content Developer</b>	<b>Feb '21 – May '21 (3 Months)</b>
<ul style="list-style-type: none"><li>Developed a <b>GAN</b> Model to generate synthetic images, explored some papers <b>SimCLR</b>, <b>BYOL</b> and wrote articles in it</li><li>Explored and wrote articles about <b>Semi-supervised learning</b>, <b>Image Classification</b>, <b>Error Analysis</b>, <b>LSTM</b> etc</li></ul>		

## ACADEMICS

Qualification	Institute	Board / University	Year	% / CGPA
BTech (CSE)	St. Thomas' College of Engineering and Technology, Kolkata	MAKAUT	2022	8.8/10 (Up to 6 <sup>th</sup> Semester)
XII	RamakrishnaVivekananda Mission,(BKP)	WBBSE	2018	69%
X	RamakrishnaVivekananda Mission,(BKP)	WBBSE	2016	75%

## PROJECTS

<b>Zooskersky</b>	<b>Python</b>
<ul style="list-style-type: none"><li>Scrap the illegal information from the web then mined the data and made a perfect dataset for understanding the pattern</li><li>Plot a Histogram and a Graph by that Dataset we made, so it'll be easy for all to understand the focusing time for each wildlife</li><li>Certified as the Winning Project of ZooHackathon, 2019, intended to alert wildlife activists of these illegal activities</li></ul>	
<b>Sign Language Live Predict</b>	<b>Python</b>
<ul style="list-style-type: none"><li>Developed a Hand-Gesture Recognition Model that converts American Sign Language to English text, per video-frame</li><li>Deployed the strategy using PyTorch which would convert ASL to English, Live, with a test-accuracy of 96.6 percent</li><li>Recognized as one of the top finalists of the India-East Hackathon organized by the Association of Computing Machinery</li></ul>	
<b>YouCure-HealthCare</b>	<b>Python</b>
<ul style="list-style-type: none"><li>Developed a Machine Learning Model (Logistic Regression) which will predict diseases based on your symptoms with the accuracy written and will give descriptions so that you get healed fast, used NLTK Package for the model to understand the text</li><li>Recognized as one of the top finalists of the Amazon Smbhav Hackathon Organized by Amazon with Skillenza</li></ul>	

## ACHIEVEMENTS AND CERTIFICATES

Winner of ZooHackathon 2019, Regional organized by World Wide Fund for Nature	November, 2019
Top Finalist of ACM India-East Hackathon organized by Association of Computing Machinery	February, 2020
Finalist of Amazon Smbhav Hackathon 2021 organized by Amazon & Skillenza	April,2021
Deep Learning Specialization (Andrew NG), by deeplearning.ai and Coursera	February,2021
Natural Language Processing with Attention Models by DeepLearning.AI	June, 2021
Customising your models with TensorFlow 2, by Imperial College London	February,2021
SQL for Data Science , by UC DAVIS	May,2021

## TECHNICAL SKILLS

- Data Science Frameworks:** Tensorflow, Keras, Scikit-Learn, Pandas, NumPy, Matplotlib, Seaborn, tableau
- Machine Learning:** Hands-on implementation of Regression, Classification and Clustering Algorithms
- Deep Learning:** DNN, CNN, RNN, NLP, BERT, GPT, GAN, , LSTM, GRU discriminative and generative models
- Data Management:** Mining, Cleaning, Preprocessing, Augmentation, Web-Scraping

## HOBBIES AND INTERESTS

- Hackathons and Backend Development
- Statistics, Classical Machine Learning Algorithms, Deep Learning Architectures
- Football, Cricket, Badminton
